Server Ready: run npm run dev

The screenshot shows a VS Code editor with a file explorer on the left containing files like .gitignore, package-lock.json, package.json, tsconfig.json, and .env. The .env file is open in the editor, showing configuration for Groq, OpenAI, Anthropic, and Mistral AI models, along with MongoDB settings. The terminal at the bottom shows the command 'npm run dev' being executed, and the output indicates that the QA Bot API is listening on http://localhost:8787 and has successfully initialized the retrieval pipeline with the specified models and MongoDB database.
