

Phase-2 Week-11 Day-1 Home assignment

LLM Model Switching

Use the user-story-to-tests-updated-ui application and implement a model-switching option for the following LLM providers:

- 1.OpenAI
- 2.Anthropic
- 3.Google Gemini

Users should be able to select any provider from the UI and generate test cases using the selected model.

Prompt:Act as a senior AI engineer and analyze the user story to test case generation application. ATM it's only using groq model to generate the test cases .Once you analyze the whole application, I have to improve this application with the LangChain framework implementation. So I have to implement, as a user, I have to select the different LLM model from the list, which include OpenAI, Anthropic, Grok, Gemini, and Users should be able to select any provider from the UI and generate test cases using the selected model. plz put selection of model at the top of the left hand panel

Story Title *

Check Account Balance

Description

As a bank customer
I want to view my real-time account balance
So that I know my available funds before making decision

Acceptance Criteria *

- Given I'm logged in, when I open the "Accounts" tab, then my current balance and available balance (post-holds) are displayed
- Given I have multiple accounts, when I view the dashboard, then balances for all linked accounts are shown separately
- Given the balance fails to load, when there's a network/service error, then a retry option and last-synced timestamp are shown instead of a blank/incorrect value

Additional Info

Any additional information (optional)...

Generate Test Cases

Generated Test Cases

10 test case(s) Model: openai/gpt-oss-120b Tokens: 1731

TEST CASE ID	TITLE	CATEGORY	EXPECTED RESULT
TC-001	Display current and available balance for a single logged-in account	Positive	Current balance and available balance (post-holds) are displayed correctly for the logged-in account
TC-002	Display balances for multiple linked accounts on dashboard	Positive	Balances for each of the three accounts are shown separately with correct current and available amounts
TC-003	Prevent unauthenticated access to Accounts tab	Authorization	User is redirected to the login page or shown an authorization error message
TC-004	Handle session expiration when viewing balances	Authorization	User is prompted to re-authenticate and balances are not displayed until login succeeds
TC-005	Show retry option and last-synced timestamp on network error	Negative	Instead of blank values, a retry button and a timestamp indicating the last successful sync are displayed
TC-006	Display error message after repeated load failures	Edge	After the third failed attempt, an error message "Unable to load balance. Please try again later." is shown
TC-	Handle account with zero	Edge	Current balance and available balance are both
